Preliminary Geotechnical and Hydrogeological Tests Confirm Suitability of Proposed Campus of Care Location

February 22nd, 2024 – Following extensive geotechnical and hydrogeological testing conducted onsite at the proposed location for our Campus of Care, we are pleased to announce that initial results indicate no major issues that would impede the development of our new hospital facility.

The tests, conducted in December, have provided crucial insights into the composition of the land, including bedrock and water table depth. This data is essential for informing key design elements such as foundation depth, groundwater management, and excavation requirements for the upcoming construction phase.

"We are delighted to report that the preliminary tests have revealed no significant obstacles to the development of our Campus of Care," said Jeff Hohenkerk, CEO. "This valuable information allows us to move forward confidently with our plans to create a state-of-the-art healthcare facility that will serve our community for generations to come."

The confirmation of the site's suitability marks a significant milestone in the development process and reinforces our commitment to delivering high-quality healthcare services throughout the region. The Campus of Care will not only provide essential medical services but also contribute to the overall well-being and vitality of the community.
